# GREEN Line

## *Construction Features*

**G**REEN Line Cases are manufactured from selected bone-dry cypress, covered with heavy gauge steel finished in olive green enamel, baked. The edges are bound with extra heavy steel angles, corners and other important points supported and protected by heavy steel hardware heavily brass-ed. All hardware is rigidly fastened with double clinched brass rivets.

These features contribute to strength that will withstand severe use and lengthen the period of useful service. Though exceptionally sturdy, these cases are light in weight. The steel cored, genuine leather ring handles, fit the hand perfectly and they are very strong.

In the Machinists Chests great care is taken to carefully fit the drawers so they open and close easily. Only first grade material is used and all joints are lock cornered and glued so they will stand possible abuse. The highly finished oak front and a green felt lining make them very attractive to the eye.

Green Case workmen are all experienced and their work is rigidly inspected. Modern, quantity production methods are followed insuring volume output, finest quality and the lowest possible price for so much value.

## *Individual Packages*

Built of the best material, highly standardized and carefully inspected, Green Line Cases are packed in individual cartons. This method of packing saves transportation costs, economizes on storage space and insures safe delivery.

## *Policy*

**F**ROM the beginning our policy has been to seek and maintain distribution through the legitimate trade outlets—a strictly jobber-dealer policy.

There is real profit in the high quality Green-Case line of standardized tool cases. Your sales effort is backed by consistent trade journal advertising, supplemented with direct mail campaigns, attractive literature, newspaper advertisements and other helpful material.

Our first consideration is to maintain finest quality and lend every effort toward helpful cooperation with jobbers and dealers. Any constructive suggestions toward improvement are heartily received.

## *Location*

Here in Racine, practically a suburb of Chicago, the center of rail and water transportation, a plentiful supply of raw material is available and competent labor abundant. Two steam lines, an electric line and a boat line out of Racine make our shipping facilities of the best. This insures prompt delivery to our customers at all times. Shipments are made either from Racine or our completely stocked warehouse in New York City.
